

Reduce Your Carbon Footprint with Cartridge World Cleveland!

Cartridge World North America has announced that its customers will help avoid 1 million pounds of carbon emissions annually by reusing printer cartridges instead of buying new.

This is the equivalent of taking almost 100 passenger cars off the road for one year and recycling 150 tons of waste instead of depositing it in a landfill.

Why?

The study, performed by Brown and Wilmanns Environmental, LLC, estimates the transport-related carbon dioxide emissions of transporting original equipment manufacturer cartridges from overseas production facilities to U.S. retailers versus refilling or remanufacturing those cartridges locally at a Cartridge World store.

The average carbon dioxide footprint of Cartridge World ink and toner operations is 40% lower than what may be expected from OEM cartridges.

The carbon dioxide reduction of transportation-related carbon dioxide is over 70% for toners specifically.

In addition to reducing product transport emissions, Cartridge World customers also keep cartridges out of landfills and reduce the need for manufacturing. Both of these results conserve resources and energy, reducing your environmental footprint.

Cartridge World at Kamm's Plaza recycles all internally used papers, plastics and metals.

Cartridge World at Kamm's Plaza currently runs recycling programs with nearly twenty different schools, churches and businesses.

Cartridge World at Kamm's Plaza currently spends 10% of its monthly grocery budget on local, natural foods.
